Australia's (Possible) Educational Divide

Edwin Mellett

November 26, 2017

Abstract

A summary of your research proposal, methods and findings. Aim for ~100 words

A comparative study of the effect of student dispositions on mathematics literacy in Australia between public and private schools.

Introduction

Describe the background to the report. Discuss previous work (e.g. OECD reports, academic articles, etc.) that support your hypothesis. This is the section where you have the chance to convince the reader that your question is worthwhile.

Methods

Mention the R packages you have used Briefly describe the analytical techniques you have used Keep this section short

Results

Figures: Tables, plots and diagrams Only include figures that you are going to refer to in the Discussion You must have descriptions of the figures (i.e. it must be clear in the text what the figures show and why you have included them), but only include minimal interpretation in this section.

Discussion

This is where you offer your interpretation of the results Use neutral language Don't make sweeping generalisations that aren't based on evidence This section should have your highest word count

Conclusion

What are the main points to draw from the discussion? Is there further investigation warranted?

References

Does not count towards word count
